Brief history

- Founded in 1988
- Incorporated in 1996
- Main registered office in Delhi, India
- Director Kamal Kant Gupta (MS, MMS) (BITS PILANI)
- First Company to develop and sell Medical diagnostic management package (LABMATE) in the field of health care industry.

More Information

Busysoft Systems was started by Mr. **Kamal Kant Gupta** in 1988 as a proprietor ship company acting as computer consultants and offering services in computerization of business activities of software development. The company provides services to small and medium scale organizations with a view that computers need not be a novelty. Small users should also be able to think of “Business Using Computers” to make best use of technology in the business world. That is why; company’s services are user oriented and cost effective.

Since 1988 company has developed a series of low cost computerized software applications in common as well as business specific areas such as garment exporters, travel management, grain merchants, health care industry, educational institute management and control systems. Some of our best-known software applications are **Labmate, Docmate, Sono-Imager, Slide-Imager, Hospmate, Schoolmate, Rheosoft, Viscosoft, Export-Man, Travel-It, Weight-It** and **Aadati** (Grain merchant). Recently the company has launched **labmate.net ERP**, an ERP application for medical testing laboratory management for big medical diagnostic centers.

In 1996 the company changed its status to private limited company. The company now enjoys a reputation of being leading software developer in the field of health care industry. Our aim is to make software as user friendly as possible. The motto of the company is “**We make software that works as per you**”. To achieve the same we make software with which, each esteemed client should be able to work according to its own environment, critical business issues, location and preferences.

Our Approach

Using professional skills company develops low cost and effective software services. The services are customer oriented and are designed to ensure that computerized systems result in greater efficiency and cost effectiveness. This specific approach of the company for the conversion of customer’s requirements into computerized systems just ensures the same.

Busysoft approach to software design and development is marked by an emphasis on custom installation and ability to deal with the details of functionality. Company’s software expert believes in investing time and energy in understanding the user’s need and environment. It is characterized by an illustrative use of contemporary concepts and innovative techniques with an emphasis on project modeling. System’s approach involves phased development, starting from problem to implementation of the most feasible solution.

Company has sufficient technical and financial resources to meet the demands of the fast changing market. Its major strength lies in professionals controlling all of its activities.

Man

People are the most desired assets of any organization setup. They form the core of any resource base. We have over the years have evolved a team of professionals dedicated to the core segments of our activities. The team acts with fresh ideas, with an innovative approach to every problem. The team consists of professionals who have grown with us, through a variety of projects. The team now has more than 90 man-years of experience in the field.

Machine

Wide range of sophisticated manmade objects reflects the dynamics of an organizational setup and the company has that. These form an important tool to enhance the process of development. With a network of Pentium servers, workstation and printers with a wide range of development software products the company has a strong base for taking reasonably sophisticated projects for computerization. The company is changing development tools from time to time to keep up with the technology.

Our Philosophy

At Busysoft we believe that a small team of dedicated professionals creates the world’s best software. Our goal is make the best and most featured software for the customers. We always try to provide most stable and user oriented software.

Busysoft Current activities and plans

Net-based solutions: We at Busysoft currently are involved in developing net-based solutions for mainly health care industry. The applications are being designed using VB script, C#, Java Script, with ASP.net. The database used currently is MS-SQL and MS-Access.

- **Labmate.Net:** An application for medical diagnostic laboratories for keeping all the available patient investigation records on the net. The various users such as patients, referring doctors, and hospitals can fetch these records using a password and an ID.
- **Docmate.net:** This application is for consulting doctors. The doctors can send patient information such as history, procedures, images to other doctors and referral institutes and hospitals. The email directories will also be maintained in the application, which would give direct email facility of all reports to the desired person(s).
- **Hospmate.net:** This application is an online application Hospital Management System being developed in WPF and WCF with MS-SQL as backend database. The application is again an ERP application with integrated approach on hospital administration.
